

## TRUMP

By JOHN SMITH

Aerial view of the US White House with a green jacket flying towards it.

In a stunning revelation from the latest political thriller set to hit the shelves this week, it has been reported that Donald Trump, the iconic US President, is now facing a mysterious new adversary in the form of a shadowy figure believed to be none other than his twin, Kamala Harris. The story begins with the sudden appearance of a green jacket on the East Wing of the White House, sparking intense speculation among political analysts and conspiracy theorists alike. According to sources close to the President's circle, Kamala Harris has been subtly observing Trump's every move for some time, gathering classified information that could potentially shake the very foundation of the nation's political landscape. The President himself has reportedly expressed his growing unease at the unexpected intruder in the White House, describing it as 'a foreign invader' and demanding an investigation into the origins of this mysterious visitor. Meanwhile, word has spread across the political circuit that Kamala Harris is planning a surprise launch of her own campaign for the 2024 presidential presidency, signaling a potential

shift in the balance of power within the Oval Office. The development comes as the political world collectively holds its breath, trying to piece together what this new twist could mean for the upcoming election cycle. Meanwhile, in a separate but equally intriguing development, it has been reported that Kamala Harris is also engaged in a covert mathematics competition with her husband Joe Biden, further intensifying the already tense atmosphere within the White House. The race involves solving complex equations under timed conditions, and while Kamala has been observed to outperform Biden by an alarming margin, official results have yet to be released due to security concerns. The situation is further complicated by the fact that Kamala Harris's victory seems to have triggered a series of automated security alerts within the White House, leading to increased surveillance across the estate. In a rare statement addressed to the media, Kamala Harris has declined to comment on the ongoing developments, choosing instead to focus on her campaign preparations and upcoming appearances at key political events. However, it is believed that she has been working closely with some of the most brilliant mathematicians in the country, further cementing her reputation as a formidable figure not only in politics but also in academia. The White House press corps remains unaccounted for in this peculiar turn of events, with speculation rampant about whether any of the journalists involved in the latest reporting could be the missing link in Kamala's strategic calculations. As the political world continues to unpack this bizarre chapter in US history, one thing is certain: the coming 2024 election promises to be anything but ordinary, with the potential for unexpected alliances and a host of new challenges on the horizon. The race between Kamala Harris and Joe Biden has already taken an unexpected turn, with Kamala's mathematics edge suggesting that she may have the upper hand in both politics and academia. As

the year 2024 approaches, the stage is set for a dramatic shift in the nation's political landscape, leaving many to wonder what exactly is going on at the highest levels of government. The developments involving Kamala Harris are believed to be the tip of the iceberg, with even more surprising twists and turns expected as the year unfolds. With so much at stake, no one can afford to rest their guard, and the coming year promises to be an electrifying chapter in American history.
